Night Sky Program

Monday Night November 14th at 7:30 pm SUPERMOON!
Jaggar Museum & Overlook

The November 14th Supermoon is the Closest Moon to Earth Since 1948! Because the moon's orbit around earth is slightly elliptical it is sometimes closer to earth. When the moon is full as it passes closest to earth it is called a "Supermoon." In the Hawaiian lunar calendar, the full moon is referred to as *Hoku*. Join **Night Sky Rangers Pascal Nelson** and **Peter Galloway** as they navigate through the deep Hawaiian cultural significance of moon phases and the best view of *Hoku* since 1948. This program is free!

Mai ka pō mai ka `oiā`i`o
Truth comes from the night
